EDUCATION

University of California, San Diego

Expected: June 2026

Bachelor of Science in Computer Science | Dean's Honors List

3.7 GPA

EXPERIENCE

Software Engineering Intern

Apr. 2026 – Present

Intuit Inc.

Mountain View, CA

- Working on agent-based systems, distributed data infrastructure, and cloud-scale services on the Datacloud team.

Software Engineering Intern

Jun. 2025 – Sep. 2025

Intuit Inc.

Mountain View, CA

- Spearheaded end-to-end design and implementation of a **Python** sales agent that enriches **Salesforce CRM** leads by orchestrating LLM calls through **LangChain/LangGraph** and **SQL**, and processing thousands of records per hour.
- Built **agentic** routing logic with intent scoring and custom metrics to choose the next outreach action—email, SMS, list segmentation; improved customer conversion by **3%** (one-fifth of the division's quarterly growth target).
- Deployed **Langfuse** tracing and offline eval scripts to monitor latency, cost, and quality across agent runs.
- Shipped weekly releases in **Agile/Scrum**, owning stories end-to-end from planning through review, demo, and rollout.

Software Engineering Intern

Aug. 2024 – Jan. 2025

Lawrence Livermore National Laboratory

Livermore, CA

- Developed full-stack features for DARC, a secure data archive platform, implementing **Angular** search and metadata workflows and shipping **FastAPI/Pydantic** endpoints with **REST/OpenAPI** contracts, deployed via **Uvicorn** in **Docker** to support compliant archival and discovery across classified and unclassified data.
- Optimized search and metadata retrieval by redesigning query patterns and adding targeted indexes in **MongoDB**, improving application search speed by **0.15%** and reducing data overhead by approximately **7%**.
- Reduced backend latency by caching hot metadata paths with **Redis** and offloading full-text queries to **Elasticsearch** (search indexes), trimming response payloads with selective projection and server-side pagination, reducing p95 latency.

Software Research Assistant

Sept. 2023 – Aug. 2024

University of California

- Implemented economic flood loss modeling by joining geospatial hazard layers with asset exposure and crop impact datasets in **Python** and **DuckDB**, computing scenario damages across return periods and vulnerability parameters.
- Built a reproducible **ETL pipeline** with caching and **vectorized** computation in **Pandas/NumPy**, accelerating repeated model runs and reducing end-to-end runtime when refreshing inputs and recalculating damage outputs.
- Ran uncertainty analysis via **Monte Carlo simulation** and trained baseline predictive models in **scikit-learn**, validating feature assumptions and visualizing loss distributions and scenario comparisons with **Matplotlib**.

Software Engineering Intern

May 2021 – Aug. 2021

AMAX Engineering

Fremont, CA

- Built backend services in **C++** and deployed workloads on **AWS** using **EC2**, **S3**, and **IAM**, containerizing services with **Docker** and standardizing configuration and permissions for repeatable deployments across dev and test environments.
- Reduced production defects by **2.6%** by implementing **CI** quality gates for builds, unit tests, and linting, paired with structured PR reviews and deploying containerized services to **Kubernetes (EKS)** with safe rollout and rollback.

PROJECTS

HealthyUC | Python, React Native, JSX, Flask, SQLAlchemy, SQLite, Pandas, Anaconda

Jan. 2025

- Led a team of four to develop **HealthyUC**, a full-stack app promoting healthy eating among students.
- Used **Python** and **SQL** for web-scraping and filtering dining center menu data based on user preferences.
- Built a **Flask** backend with a **REST API** and a responsive frontend using **React Native** and **JSX**.

SKILLS

Languages: Python, C++, C, Java, JavaScript, HTML/CSS

Frameworks: React, Node.js, Express.js, Flask, FastAPI, WordPress, TailwindCSS

Developer Tools: Git, Docker, Poetry, Kubernetes, AWS, Google Cloud, Firebase, Agile, Scrum, Unit Testing, Debugging

Libraries: Pydantic, TensorFlow, PyTorch, Pandas, NumPy, Matplotlib, LangChain, LangGraph, Langfuse

Databases: MongoDB, PostgreSQL, DuckDB, CockroachDB, MySQL, SQLite,

Technologies: Salesforce, Redis, Elasticsearch, OpenAI API, OpenAPI, Uvicorn, ArcGIS, Riot API, Discord API

Achievements: Grandmaster in LoL, Top 500 in Overwatch, Legend in Hearthstone, Top 0.1% on Chess.com
